THE NATURE OF LIGHT

To understand the **nature of light** it does take some study of basic scientific fundamentals so when assessing what is best for your particular situation you are armed with knowledge rather than guesswork.

We have all heard of the light "spectrum" which is what a rainbow displays so vividly for us. It shows us that the white light we see is in fact a mixture of many colours. The reason the rainbow is coloured is because white light is reflected once it travels through a raindrop and the colours dispersed or spread out as it leaves the drop. Red light as seen from raindrops are at an angle of 42° and blue light is from those at 40° to the line of horizon. All other colours come from drops between these two angles.

So what exists outside the limits of the visible light spectrum ?

For this you have to know that light is in fact a form of electromagnetic wave consisting of photons from nuclear reactions on the sun. The human eye can see radiated wavelengths from about 380 to 700 nanometres. A nanometre is one billionth of a metre. Red light for example has a wavelength of 650nm and has a "frequency" of 450 million cycles, this being the number of waves of red light that will pass a given point in one second. Radio waves have much longer wavelengths and from the diagram below you can see the pattern of electrical things around us emerge. From radio, television, radar, microwaves on to X-rays, gamma rays from atomic bombs and cosmic rays from space. So light is just a small part of this chain.

Heat and light can be shown below to also have a special relationship

CHANGING WAVES

Why do things glow when they are very hot? The answer is that they emit visible electromagnetic waves - or light. Even a very cold object, such as a block of ice, emits waves, but the waves are weak, and they are much too long for human eyes to detect. As an object becomes warmer, its atoms emit much more wave energy, and the waves it produces become shorter and shorter. If it is warmed enough, it will eventually start to glow. This happens because the waves it emits are now short enough for human eyes to see.

Heat atoms emit light at the red end of the visible spectrum

1 BECOMING VISIBLE
A cold steel bar emits no visible light. It can be seen in daylight because it reflects light that falls on it. In the dark it is invisible. But if the bar is heated, it produces visible light. The bar is emitting light with wavelengths of about 700nm - just within the red end of the visible spectrum.

2 ORANGE HEAT
The bar is now hotter still, and it is emitting more light. At this temperature more of the light emitted has a shorter wavelength about 630nm - giving the bar an orange colour. Further away from the tip of the bar the colour changes because the temperature gradually decreases.

3 YELLOW HEAT
The bar is now extremely hot. The most prominent colour of light being emitted is yellow, with a wavelength of about 580nm, though others are present. The hottest parts of the bar still emit orange and red light, but these colours are masked by the much more intense wave of yellow light.

4 WHITE HEAT
The heat is now so intense that the bar is radiating most colours of the visible spectrum, which add together to appear white

BASIC PRINCIPLES AND TERMINOLOGY OF LIGHTING DESIGN

Light for our living and working environments is produced a number of ways today.

Filament lamps use "incandescence" to glow as an electric current heats the filament inside a gas filled vacuum.

Only about 8% of the electrical energy is converted into light.

Quartz filament halogen lamps use halogen gases such as iodine and quartz filaments to produce whiter and brighter lighting than incandescent lamps but are not so energy efficient.

Fluorescent lights came from filling a tube with low pressure gas and passing a current through it making the gas give off ultraviolet light that would strike the phosphor coated tube lining making it fluoresce. ie the phosphor atoms absorb light of one wavelength and release the energy as light of another wavelength.

Discharge lamps use gases such as mercury and sodium under both high and low pressures to emit different spectra.

Light emitting diodes (LEDs) differ from other light sources in the way they generate light. The first white LEDs were created by coating blue LEDs with phosphors that gave off yellow light which combined with the blue to create white light.

Technology advances are making these LEDs brighter and more economic to produce.

LEDs can now have higher brightness, no infra-red or UV radiation, no heat effect, no flicker, no noise, no pollution, no radio interference, no silver and other contamination. There is no danger of hurting our eyes and skin. Also artwork and delicate objects are protected from the effects of long time lighting exposure.

Power consumption is half comparing with current fluorescent energy saving lamps.

Life span is over 50,000 hours so costs of maintenance and replacement are drastically reduced.

Lumen (lm) is the amount of light produced from a source. Also referred to as **luminous flux**.

Candela (cd) is the unit of measure for **luminous intensity** and is used to show how bright a lamp is at a given angle of direction.

Graphs can be used as shown opposite to illustrate the performance of reflector lamps.

Formula	Luminous flux (lm)
Luminous intensity (cd) =	————— Solid angle (sr)

Lux (lx) is the ratio of the amount of light (lumen) measured on a surface proportional to the area of that surface.

Known as the **illuminance**

It quantifies the amount of light falling on the surface. Based on the measure that one lumen over one square metre produces one lux. A typical graph is shown opposite

Formula	Luminous flux (lm)
Illuminance LUX (lx) =	————— Area (π r ²)

Luminous efficacy is measured in lumens/watt (lm/w) and is the amount of lumens being emitted from a lamp proportional to the power in watts used by the lamp.. A lamps **efficacy** is determined by its efficiency to turn electrical energy into light.

Colour Temperature is the colour shown at a particular temperature measured in Kelvin units (°K) which are a measure of thermodynamic temperature.

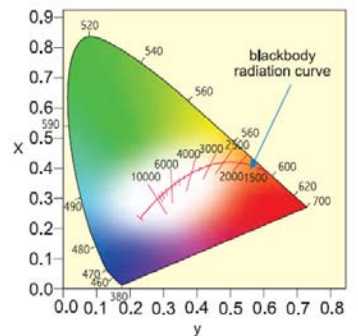

°C = °K-273.15 °C and absolute zero is minus 273.15 °C and is 0 °K

When a black surface is heated enough and begins to emit light it starts to glow a dull red. As more heat is applied it glows yellow and then white and finally blue through the spectrum. As illustrated on the previous page as a piece of metal is heated the colour of light emitted by the metal will be changed as its temperature increases.

Higher colour temperatures (5,000K or more) ► cool colour (bluish white)

The middle temperatures (3,700-5000K) ► neutral colours (nearly white)

The lower colour temperatures (2,600-3,700K) ► warm colours (yellowish white through red)

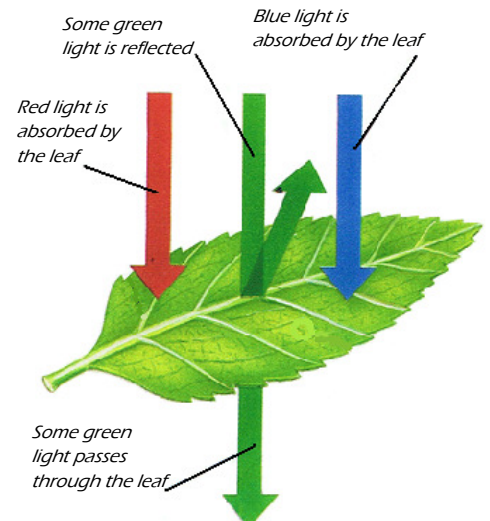

Colour Rendering Index CRI (Ra) is a measure of the ability of a light source to reproduce the colours of different objects faithfully in comparison with an ideal or natural light source.

A lamps value on the Ra scale is measured from 0 to 100 on the CRI.

4100K
Cool Colour
CRI is lower

3000K
Warm Colour
CRI is higher

It needs to be remembered that visible things give off light in two different ways. Some emit light as a light source and others simply **reflect** light that is already made. A leaf for example when white light falls on it **absorbs** some of the spectrum colours and reflects or transmits others. This is why a leaf looks green as it absorbs almost all the colours in sunlight except one — green and reflects this, so green is the colour that is seen.

Led bulb light is high brightness no infrared, no UV, no heat effect, no flicker, no noise, no pollution, no radio interference and other contamination.

TML401

TML501

The Bridgelux family of LED Array products delivers high performance, compact and cost-effective solid-state lighting solutions to serve the general lighting market. These products combine the higher efficiency, lifetime, and reliability benefits of LEDs with the light output levels of many conventional lighting sources.

DON'T RISK YOUR FAMILIES SAFETY

Halogen Downlights operate at a temperature of between 180-200 degrees Celsius and have been the cause of numerous Fires. As of June 2008 the Australian Government stipulated that all new installations of Halogen Downlights must use a HEAT GUARD. This can will shield your ceiling from dangerous heat expelled from your downlights.

AUSTRALIAN STANDARD Wiring Safety Regulation (AS/NZS 3000:2000(Clauses 1.7.6, 1.8.6, 1.9.2, 4.3.2 etc) state that there must be "Protection provide against thermal effects, eg. Enclosure, guarding or screening flammable materials, hot surfaces and parts that may cause physical in injury.

HEAT GUARDS

3042COVER

Heavy duty cover to suit 2 part gimbal 3042 & 4042 downlight series.

- Easy DIY installation. Can be fitted to existing downlights
- Complies with AUSTRALIAN SAFETY REGULATIONS.

HEAT GUARD COVER

Aluminium Heat Guard cover

- Made from Premium Aluminium for MAXIMUM heat dispersion.
- Provide a seal around your downlights preventing dust entering from the ceiling.
- Easy DIY installation. Can be fitted to existing downlights.
- Complies with AUSTRALIAN SAFETY REGULATIONS.

SLIMLINE LINKABLE T5

DESCRIPTION

Linkable fluorescent light fittings

Features:

- Ultra slim design enhances light output
- T5 Electronic ballast
- Instant start up
- Easy touch ON/OFF switch
- Extruded PVC housing
- Frosted polycarbonate diffuser
- Complete with T5 4000K fluorescent tube
- Up to 10 fittings may be linked together to form a continuous strip of light using the flexible links supplied with the fittings.
- Average lamp life: 15,000hrs
- IP Rating: IP20

Accessories Included:

- 1.) Mounting bracket 1 set
- 2.) Flex and plug
- 3.) Straight connector
- 4.) 150mm Flexible joiner

FLEXIBLE STRIP LIGHT

High brightness SMD 3528 and SMD5050 is used as the light source and high temperature resistant PCB is used for flexible strip light. Colour such as warm white and cool white etc, 3 LEDs cuttable and double adhesive tape is used at the back of strip light. The thin PCB design and lower working voltage make the strip lights easy to be operated. It is widely used for indoor decoration, signs, backlighting or edge lighting, etc.

STAR 10W LED

STAR 10W LED module kit

Introducing the NEW STAR10W LED range of LED lamp with dimmable driver is specifically designed as a replacement of the traditional MR16 50W halogen lamps in most applications. It's as easy as removing the standard MR16 lamp and transformer and replacing with the new STAR10W LED lamp and LED driver.

Featuring:

COB (Chip on board) LED which is then matched with a specifically designed heat sink to disburse heat away from the LED. All this is then perfectly matched with dimmable LED driver complete with flex and plug for easy installation.

2 Years Replacement Warranty

Complete kit included:
Dimmable driver
1M flex & plug

Product Specifications:

Product Code:	STAR10W
Wattage:	10W
Power factor:	≥ 0.92
Colour / lm:	Warm white (3000K) 650lm Cool white (5000K) 720lm
Input Voltage:	100-265Vac
CRI:	> 83
Beam Angle:	60°
Lifetime:	50,000hrs
Operating Temp:	-20° to 65°
Dimmable:	Trailing edge or Universal

T8RA18 LED T8 TUBES

The integrated T8 LED tubes are bright, consume less power and is energy-efficient. The light's beam angle is enlarge to 120° this ensures that the light is spread evenly and does not cast shadow on surfaces.

Specifications:

- LED Source: SMD2835
- LED Qty.: 132
- Rated Power: 18W
- Colour Temp.: 6500K
- Power Efficiency: >90%
- Rendering Index: ≥70Ra
- Lumen: 1600lm
- Beam Angle: 120°
- Power Factor: ≥0.95
- Housing: Magnesium Alloy
- Life Span: 40,000hrs
- Safety Standard: IEC60968
- EMC Standard: IEC61000-3-2
- Certifications: CE, ROHS, C-TICK, SAA

A-STAR 20W LED OYSTERS

This elegant LED light and fitting is powerful enough to light up a room or office. Equivalent in light output to a 40W circular fluorescent light, its safe polycarbonate housing reduces glare and looks great. Ideal in waiting rooms, commercial offices, high or raked ceilings, kitchens, large open plan living.

PRODUCT INFORMATION

The A-Star oyster is suitable for general residential lighting applications. With its long life span and insect tight design, the light fixture requires zero maintenance. It is also able to achieve up to 50% energy savings compare with a standard 40W T8 tube with the same brightness.

FEATURES:

- Long life span up to 35,000hrs
- 20W SMD LEDs
- Frosted polycarbonate diffuser
- Insect tight design prevent intrusion of insects into luminaire
- Colour temp:
 Warm white 3000K
 Cool white 5500K
- Beam angle: 120°
- IP rated: IP44
- Size : L382 x H112

ERL5C
Dimmable LED Reading Light

SPECIFICATIONS:
Name: led reading light
Model: ERL5C
Power Consumption: 5W [Super Bright SMD Leds]
Luminous Flux: 400lm
Input Voltage: 12V DC (with an adaptor)
Colour: cool white

FEATURES:
1. Energy Saving: **80%** less than conventionals
2. Dimming Function
3. Inductive Switch
4. Eye protection & Long Lifespan

The Light Globe, Invented in the late 19th century still remains in every household for fundamental reason, to provide light. Style has changed a little bit and energy efficiency and brightness has improved as well. The globe shape which was common over one hundred years ago, is becoming popular again, Beal Pritchett P/L is proud to sell these dimmable 60W lamps in a bayonet B22 model ST64-60-BC with 90 filament anchors, and also available in E27 edison screw model ST64-60-ES also with 19 filament anchors.

The range also includes two round B22 60W G95-60BC (large) Dia. Ø90mm G125-60BC (X-Large) Dia. Ø125mm an ideal with cord suspension fittings.

DIMFD In-Line Dimmers

- For use with halogen and incandescent lamps
- Suitable for table lamp
- Regulated by built-in rotative potentiometer
- TRIAC based dimmer for resistive load

Voltage: 240V / 50-60Hz
 Load range: 40-160W
 Ta: 0-40 °C

LS9300 In-Line Switch

- Cord line switch
- For use with halogen and incandescent lamps
- Suitable for table lamp
- Regulated by built-in rotative potentiometer
- TRIAC based dimmer for resistive load

Voltage: 240V / 50-60Hz
 Load range: 40-160W
 Ta: 0-40 °C

3023	1/2" threaded entry with shade locking ring.
3024	1/2" threaded entry. Plain body.

BATTEN FIX & CORD GRIP LAMPHOLDERS	
PART NO.	PACKED IN BOXES OF 20
3000E	BC B22D socket with nylon cord grip entry shade locking and earth terminal.
3020E	SBC B15D socket with nylon cord grip entry shade locking ring and earth terminal.
3009E	BC B22D 3holes batten mounting holder with shade locking ring and earth terminal.
3027E	SBC B15D 3 holes batten mounting holder with shade locking ring and earth terminal.

E27 EDISON SCREW BRASS LAMPHOLDERS	
PART NO.	DESCRIPTION
4002E	1/2" threaded entry Plain body E27 lampholder with earth terminal. Rated 250V 4A.
4010E	1/2" threaded entry E27 lampholder with shade locking ring and earth terminal. Rated 250V 4A.

The 'Safer-Switch' Enhances Safety Lampholder
This product offers the consumer an extra level of safety previously unavailable in this type of lampholder. A simple yet reliable patented innovation ensures that the switch returns and remains in the off position when ever a bulb is removed. This represents a significant advance in luminaire safety and is fully certified to BS7895:1997 Enhanced Safety Lampholder standard.

B22D BC PUSH BAR LAMPHOLDERS	
PART NO.	DESCRIPTION
PB1413E	10mm threaded entry push bar switched lampholder with shade locking ring and earth terminal.
PB3413E	1/2" threaded entry push bar switched lampholder with shade locking ring and earth terminal.

B22D LAMPHOLDER	
PART NO.	DESCRIPTION
GPO5	B22D gold anodized aluminium 2 piece M10 x 1 entry.

BATTEN FIX LAMPHOLDERS	
PART NO.	DESCRIPTION
5020	E27 (E5) porcelain batten fix lampholder. Fixing centre 38.5mm Dia. 42mm x Height 47mm
5030	B22D (BC) porcelain batten fix lampholder. Fixing centre 39.5mm Dia. 38mm x Height 35mm

E27/CER

E27 (ES) porcelain lampholder
250V 4A rating.
Screw terminals. Nickel plated
steel interior.

E14/CER

E14 (SES) porcelain lampholder
250V 2A rating.
Screw terminals. Nickel plated
steel interior.

321 ADAPTOR

E40 > E27 (GES to ES) externally screwed
porcelain reduction bush.
Adapts GES to ES sockets saves expensive
re-wiring. Reduces mogul E39 thread to E27
also.

As there is no consistent method of current rating terminal blocks we can only indicate an approximate amp rating in proportion to the tunnel size diameter of the metal inserts and mm² cable entry size.

All connectors are rated at 380V and hold Australian approvals.

Insulation material can be temperature rated as follows. (For short term use higher ratings can be obtained.)

Plastic 80 °C

Nylon 6.6 110 °C

Polycarbonate 130 °C

Noryl 150 °C

Connectors are in 12 pole strips unless otherwise stated. For a small surcharge 12 pole strips can be cut into an desired number of poles.

12 POLE STRIPS FLAT BASED

Standard

Part no.	Material	Cable Entry (mm ²)	Amp Rating	Tunnel Dia. (mm)	Length	Width	Height
BP126	Nylon	1.5	6	2.8	95	16.0	13.5

SINGLE END CONNECTOR

HE25X1

This terminal block is made of clear Polycarbonate and suitable for use with one or more stranded cables within a junction box or floating connections in light fittings.

Supplied in packets of 100pcs. Tunnel size entry 4.1mm.

PLUG & SOCKET

HE34

3 pole Plug & Socket with extended centre earth pin. The centre earth is 2mm longer than the other 2 pins.
 Rated 380V 10A. Tunnel entry size 3.5mm. Supplied in 2 parts.

HE34-A

Nylon cable clamp design for pressing into each section of the HE34. The clamp is supplied with 2 self-tapping screws.

MARKER PLATES White polystyrene

Item no.	Suits	Length	Width	Thickness	Pitch	Poles
HEBS24E	4mm ²	72cm (6x12)	19mm	1mm	10mm	72
HEBS60E	6mm ²	72cm (6x12)	22mm	1mm	12mm	60
HEBS1016E	10mm ² 16mm ²	18cm	22mm	1mm	15mm	12

FIXING PINS

Moulded push-in fixing pins allow terminal blocks to be fitted to panels up to 1mm thickness. The fixing pins can be pushed in from the bottom of the panel or from top of the terminal block. The fixing pin provides an insulated fixing between the poles.

H4PINS Fixing pin to suit 4mm² terminal blocks

H6PINS As H4PINS but suits 6mm² terminal blocks

HE4/3

SNAP ON COVER

The insulated cover provides a touch safe cover.
 Fits 3 pole 4mm² terminal blocks.

DIGITAL LUX METERS

MODEL: AR813A

Feature:
Precise and instant readout
Wide range of measurements
Reading hold function
Low battery indicator
Level range selection
Compact, light weight, with excellent operation

Specification:
Range: 1 ~ 10,000 LUX
Accuracy: $\ll 10,000 \text{ LUX} \pm 4\% + 1 \text{ Dgt}$
>10,000 LUX +/- (5% + 1 Dgt)
Sampling rate: 2 times/sec
Temperature characteristic: +/- 0.1% °C
Repeatability: +/- 2%
Power supply: 9V battery
Operation temperature: 0 °C to 40 °C
Operation humidity: 10RH% to 90RH%

MODEL: AR823

Feature:
Wide range measurement
Accurate measuring
Data hold
Max / Min measurement
Relative function
Lux / Fc selectable (1Fc=10.76 Lux)
3 Measuring ranges

Specification
Measuring range: 1 to 100,000 Lux
Sampling rate: 1.5 times/sec
Measurement repeatability: +/- 2%
Accuracy: $\ll 3\% \text{ rgd} \pm 0.5\% \text{ f.s.}$
+/- (4% rgd +/- 1 Dgt) if < 10,000 Lux
Power supply: 9V battery
Operation conditions: 0 °C ~ 50 °C
$\ll 80\% \text{RH}$ non-condensing
Storage conditions: -10 °C ~ 50 °C
$\ll 70\% \text{RH}$ non-condensing

ELECTRICAL JOINTING TAPE

Type 2501 Polyisobutylene (PIB) self-amalgamating tape.

- A strong black elastic tape with up to 46KV insulation properties.
- Water and ozone resistant, protects against corrosion.
- Suitable within temperature range 40 °C to 90 °C continuous.
- Multiple usage.

Item No.	Description	Ctn. Qty.
250119	19mm x 10mm Self-amalgamating tape	48 rolls
250125	25mm x 10mm Self-amalgamating tape	36 rolls
250150	50mm x 10mm Self-amalgamating tape	18 rolls

CLOTH ADHESIVE TAPE

- Type 3369 is a white rayon cloth adhesive tape with high tack and adhesion properties.
- Smooth attractive appearance. Very strong tape for general purpose use.

Item No.	Description	Ctn. Qty.
336925	25mm x 50mm White rayon cloth tape	36 rolls

WEATHERPROOF SEALING COMPOUND

Weatherproof brown sealing mastic. High comfortable putty-like rubber based compound that easily conforms to create water and corrosion resistant seal as well as insulation for electrical connections.

- Protects electrical connections from moisture and corrosive vapours and is widely used for a variety of electrical applications including junction and conduit boxes.
- Possesses good insulating properties and helps to prevent short circuit due to dampness.
- Is non-hardening and does not shrink, crack or peel thereby allowing the compound to be readily moved and replaced safely by hand.

Electrical specification:
DIELECTRIC STRENGTH: 15KV/MM
DIELECTRIC CONSTANT(K): 6.5
POWER FACTOR(TAN): 0.1
FLASH POINT: +210 °C
TEMP. RANGE: -20 °C to +80 °C
WORKING VOLTAGE: 1000V Max

Item No.	Description	Package
391	Brown sealing compound	2 x 250g pack

RFI SHIELDING TAPE

A fine tinned copper wire mesh used for radio frequency interference (RFI) shielding over cables. It resists fire, chemicals and corrosion and can act as thermal or electrical conductor.

Item No.	Description	Roll Length
CRF9022	Copper wire mesh	25mm x 4.6M

All purpose steel chains supplied on reels in variety of finishes. Ideal for hanging plants, pictures, mirrors, light fittings, etc. Each link is split to allow easy opening and adjusting to desired lengths.

DECO-CHAIN CATHEDRAL

Item no.	Type	Dia. Ø	Inside (mm)	Mtr per reel
601BPL	Brass plated light duty	2.2mm	24 x 10	30

SASH-CHAIN

Item no.	Type	Dia. Ø	Inside (mm)	Mtr per reel
P400	Raw brass	—	6.5 x 21	20

CHAIN PLIERS

Item no.	Description
C900560	Zinc plated steel pliers specially designed to open and closed the links of the chain without causing scratches or indentations.

Arcoelectric

Arcoelectric is the largest manufacturer of appliance switches in the UK and is a globally recognized brand.

Every month in 2010 Arcoelectric assembled over six million Switches, Indicator lights, Fuseholders and IEC Sockets.

Beal Pritchett stock only a small range of Arcoelectric products but 4 to 6 week lead times can be met for most non stock items.

Please contact our sales office or Arcoelectrics web site: www.arcoelectric.co.uk for help in ordering your correct requirements.

PANEL MOUNT FUSEHOLDERS

SNAP FIT BODY

Item no.	Description
CO345R	Snap-in body with flush mounting tool release cap. Takes 3AG 32x6.3mm fuses. Fits 16mm dia. Panel hole. Anti rotation tit. 16A rating. Panel thickness max. 2.00mm min. 0.8mm.
CO345S	As above but with finger release protruding cap.

NUT FIT BODY

Item no.	Description
CO347R	Nut fixing body with flush mounting tool release cap. Takes 3AG 32x6.3mm fuses. Fits 16mm dia. Panel hole. Anti rotation tit. 16A rating. Panel thickness max. 4.5mm min. 0.8mm.
CO347S	As above but with finger release protruding cap.

Item no.	Description
TO332R	Takes M205 5x20mm fuses. Fits 12.7mm dia. Panel hole. Anti rotation tit. Nut fixing body with flush mounting tool release cap. 6.3A rating. Panel thickness max. 4.5mm min. 0.8mm.

Item no.	Description
FHO11B	Nut fixing body with finger release cap. Takes 3AG 6x32mm Glass fuses. Rated 15amp

IN-LINE FUSEHOLDERS

Item no.	Description
ZC210300	Heavy duty 30A rated Bakelite fuseholder. Supplied with 300mm looped lead. Takes 3AG 6x32mm Glass fuses
ZC912	Splashproof fuseholder with PVC cover with 310mm lead. Takes 1A - 35A Blade fuses.

- Colours and voltage:**
- Neon Available with Red, Amber, Green or Clear lenses 100/130V (marked 110V), 200/250V (marked 230V)
 - LED-DC Red, Yellow, Blue, White 2.0/2.2V Resistors for other voltages available.
 - LED-AC Red, Yellow, Blue, White 110-230V AC operation.
 - Filament lamp Available with Red, Amber, Green, Clear or Blue lenses 6V, 12, 24V.

- ▶ Neon, LED, mains LED or Filament lamp
- ▶ Bezel sizes from 6.7 to 16.3mm diameter
- ▶ Red, amber, green, blue and white LEDs
- ▶ Wide choice of styles
